COORDINATING COMMITTEE

ADDENDUM TO

EXCEPTIONS TO SECURITY CONTROLS - PRINCIPLES AND PROCEDURES

Part E: Maximum Exemptions Procedure

The maximum exemptions procedure described below is established, effective on the 30th June 1961, and is applicable to Items 1, 5, 8, 9, 10, 12, 14, 15, 17, 20, 35, 37, 38 and 39 on the Atomic Energy List, as well as to Items 1718 and 1723 on List I, under the terms of the Notes added to these items:

- (a) Governments may permit individual shipments of embargoed items within the limits of specified maximum exemptions.
- (b) Monthly reports of licensing of such shipments will be submitted to the Committee and should include the fullest available data on each transaction, including end-use.
- (c) When any Government informs the Committee that it believes the previous shipments of any item under this procedure have reached a level which indicates that further exports might frustrate the Committee's control objectives, further use of the procedure for that item will be suspended up to a maximum period of three months, while the matter is discussed and a decision on future treatment is reached in the Committee. If unanimous agreement is not reached to continue the suspension, the use of the procedure will automatically be resumed at the end of the three months' period.
